

CHART 1 · Process flow

Ready-to-eat beef jerky · Delta, UT

The customer does not cook it. It contains beef. It is sold shelf-stable, without refrigeration.

Light box = process step **Green box = critical control point** **Red box = the lot does not ship**

If a CCP limit is missed, the lot is held and is not sold as ready-to-eat beef jerky.

CHART 2 · The three limits

From the FSIS beef jerky HACCP model, 2021-0004, and Appendix A

Point	What is measured	The lot passes if
Prerequisite	Product temperature	Below 41°F. Not a CCP.
CCP 1 Cooking	Internal temperature	145°F or above for at least 4 minutes
CCP 1 Cooking	Wet bulb	At least 125°F for at least 1 hour
CCP 1 Cooking	Relative humidity	At least 27% for at least 1 hour
CCP 1 Cooking	Sealed oven	Dampers closed within 30 minutes, and kept closed for 1 hour or 50% of the cook, whichever is longer
CCP 1 Cooking	Come-up time	From 50°F to 130°F, 6 hours or less
CCP 2 Drying	Dry bulb	At least 170°F during drying
CCP 2 Drying	Water activity	0.85 or less. Highest of at least six pieces.

A blank or the word “yes” does not count. The measured number has to be written. If a CCP number is missing, the lot does not ship. 9 CFR 417.5.

Carne Seca Jesus Canales, LLC · 411 E Main St, Delta, UT 84624 · Limits from the FSIS beef jerky HACCP model (2021-0004) and Appendix A (December 2021).
